Technology

The technology plan for the district envisions the following:

A technology-rich, networked environment where students and staff use state-of-the-art technology and creative strategies which encourage active learning, quality instruction, effective classroom management, progressive administration and vital communication.

The use of technology can enhance the educational process. Technology can be applicable at all grade levels and in every curriculum area. However, the study of technological advances and the use of various applications are only part of the educational program. Technology is not an end in itself, but a means to an end. The use of technology should be driven, like any other instructional strategy, by what is best for the student and how best to meet the student's educational needs.
