

## **Design of New Buildings**

The following factors will be considered in the selection of the design of a new building:

- Simplicity in a functional design;
- Initial design to which future additions may be made without major changes in mechanical features or basic facilities such as multipurpose rooms, libraries, and other centralized facilities and which would provide for future interior modifications at minimum expense;
- Design which would convert to year-round use with a minimum of additional expense;
- Design which would most satisfactorily accommodate and encourage the educational program.

### **Educational Specifications**

It shall be the responsibility of the district staff, working in cooperation with the architect, to develop the educational specifications for new school buildings. These specifications will then be sent to the Board of Directors for approval.

Educational facility specifications shall conform to the latest District goals, visions, and guiding principles.

END OF POLICY
