

Gresham-Barlow SD 10

Code: **JHCCBA/EBBAB/
GBEBAA**

Adopted: 7/11/94

Revised/Readopted: 1/11/01, 5/2/02

Orig. Code(s): GBEBBC

Infection Control - HIV, AIDS, HBV and Other Pathogens

The Board recognizes that staff/students incur some risk of infection and illness each time they are exposed to blood or other potentially infectious materials. While the risk to staff/students of exposure to body fluids due to casual contact with individuals in the school environment is very low, the Board regards any such risk as serious.

Consequently, the Board directs adherence to standard precautions. Standard precautions require that staff and students approach infection control as if all direct contact with human blood and body fluids is known to be infectious for HIV, HBV and/or other bloodborne pathogens.¹

In order to reduce the risk to staff/students by minimizing or eliminating exposure incidents to bloodborne pathogens, the Board directs the superintendent to develop and implement an Exposure Control Plan.

The plan shall include training followed by an offer of immunization with Hepatitis B vaccine and vaccination series for all staff who are required to provide first aid to students and/or staff and/or for all staff who have a higher risk of occupational exposure as determined by the district. A post-exposure evaluation and follow-up shall be made available to any employee sustaining an occupational exposure.

The district shall provide annual staff training in correct procedures for handling/cleaning of body fluids in a way that minimizes risk of infection. Staff are required to attend training. Infection control kits and other personal protective equipment shall be provided as may be required.
