

Home and Hospital Tutoring

All tutoring services for medical/health reasons must be coordinated through the special services office. The following guidelines will apply to these services:

1. The home/hospital tutorial process will be activated by verbal communication from the principal to the special services office.
2. Days and times for tutoring will be arranged between the tutor and the parents and will be mutually convenient.
3. Tutoring will typically be five hours per week direct instruction.
4. Tutoring will continue until the physician pronounces the student able to return to school.
5. In the case of pregnancy, tutoring will not take place before the birth of the baby unless there is a physician's prescription. After delivery, tutoring will be available for a maximum of six weeks unless there is a physician's prescription.
