

Evacuation Drills – General Information

Emergency evacuation drills are an important part of providing the students with the required instruction in safe bus riding practices.

Evacuation drills will be conducted twice a year at the transportation supervisor's direction.

The front door evacuation is the most convenient drill to conduct. Use the rear door in an evacuation when the front door is blocked or otherwise unusable.

Use the split-door evacuation to unload the bus in the shortest amount of time.

Emergency Windows

Never attempt an emergency window evacuation drill. Demonstrate how to open and close them.
