

## Prescription Medication\*\*

The public charter school recognizes that the administration of prescription medication to students and/or student self medication may be necessary when the failure to take such medication during school hours would prevent the student from attending school, and recognizes a need to ensure the health and well-being of students who require regular doses or injections of medication as a result of experiencing a life-threatening allergic reaction or adrenal crisis<sup>1</sup>, or have a need to manage hypoglycemia, asthma or diabetes. When a licensed health care professional is not immediately available, a designated trained staff member may administer to a student, epinephrine, glucagon or other medications as prescribed and allowed by Oregon law.

When prescribed by a physician<sup>2</sup>, students in grades K-12 will be allowed to self administer prescription medication, including medication for asthma or severe allergy as defined by state law, and will be subject to age-appropriate guidelines. A written treatment plan for a student who self administers medication will be developed and signed by a physician or other Oregon licensed health care professional and kept on file. A written request and permission form signed by a parent or guardian is required and will be kept on file. If the student is deemed to have violated Board policy or medical protocol by the public charter school, the public charter school may revoke the permission given to a student to self-administer medication.

The executive director will require that an individualized health care plan is developed for every student with a known life-threatening allergy, and for every student for whom the public charter school has been given proper notice of a diagnoses of adrenal insufficiency. Such a plan will include provisions for administering medication and/or responding to emergency situations while the student is in school, at a school-sponsored activity, under the supervision of school personnel, in before- or after-school care programs on school-owned property and in transit to or from school or school-sponsored activities.

A request for the public charter school to administer prescription medication to a student shall include the written request and signature of the parent or guardian and shall be accompanied by written instruction from a physician, physician assistant or nurse practitioner. A prescription label prepared by a pharmacist will be deemed sufficient to meet the requirements for a physician's order.

The public charter school reserves the right to reject a request to administer or allow self administration of a medication when such medication is not necessary for the student to remain in school.

---

<sup>1</sup>Under proper notice given to the public charter school.

<sup>2</sup>A registered nurse who is employed by a public school may accept an order from a physician licensed to practice medicine or osteopathy in another state or territory of the U.S. if the order is related to the care or treatment of a student who has been enrolled at the school for not more than 90 days.

A premeasured dose of epinephrine may be administered by designated, trained public charter school staff to any student or other individual on school premises who the personnel believe, in good faith, is experiencing a severe allergic reaction, regardless of whether the student or individual has a prescription for epinephrine.

A process shall be established by which, upon parent written request, a backup prescribed autoinjectable epinephrine is kept at a reasonable secured location in the student's classroom as provided by state law.

Training shall be provided to designated staff as required by law in accordance with approved protocols as established by the Oregon Health Authority. Staff designated to receive training shall also receive bloodborne pathogens training. Current first-aid and CPR cards are strongly encouraged for designated staff.

Prescription medication will be handled, stored, monitored, disposed of and records maintained in accordance with established public charter school regulations governing administering noninjectable or injectable, or prescription or nonprescription medicines to students including procedures for the disposal of sharps and glass.

The executive director will ensure student health management plans are developed as required by training protocols, maintained on file and pertinent health information is provided to public charter school staff as appropriate. Such plans will include provisions for administering medication and/or responding to emergency situations while the student is in school, at a school-sponsored activity, under the supervision of school personnel, in before- or after-school care programs on school-owned property and in transit to or from school-sponsored activities.

This policy and its administrative regulation shall not prohibit, in any way, the administration of recognized first aid to students by school employees in accordance with established state law, Board policy and procedures.

END OF POLICY
