Indoor Air Quality (IAQ)

The Board recognizes that a safe and healthy school environment is important in contributing to the health of students and adults. Good indoor air quality (IAQ) is essential to creating a healthy learning environment for students to participate in the educational process. IAQ problems include but are not limited to mold, pollutants, lead and poor ventilation.

The ESD is committed to maintaining good air quality in all ESD facilities. The Superintendent is responsible for implementing an IAQ Management Plan. This plan will also include a process for monitoring ESD facilities, reporting IAQ problems and enacting solutions to those problems.

The ESD's goal is to improve indoor air quality in new construction and while making repairs, renovations and maintenance to existing facilities. When reviewing bids of this nature consideration will be given to those contractors who incorporate good indoor air quality into their design plans.

The Superintendent is directed to develop procedures for the implementation of this policy.
